BOB AI – FLASH REPORT - AECC

IT GROUP

06/10 – 10/10 Week

BOB AI Usage

Monday	**(+)**	Service available – normal operation
Tuesday	**(+)**	Service available – normal operation
Wednesday	**(+)**	Service available – normal operation
Thursday	**(+)**	Service available – normal operation
Friday	**(+)**	Service available – normal operation

Highlight

(+) – No service interruption reported this week. A technical feedback session was held with BOB users to collect usage patterns, pain points and improvement opportunities. Main topics raised were context growth during long sessions, increasing token / Bob Coin consumption, early MCP usage, Skills and Rules sharing, IDE integration and licence availability. Several teams are already experimenting with reusable Skills and project specific instructions. A consolidation of existing assets from Git and Confluence is being initiated.

Global Overview

Progress observed

Growing adoption across development teams	Concrete use cases around Java migration, testing, documentation and code analysis.
Use of reusable Skills and Rules	Teams are starting to create reusable Skills, Rules and project context files.
Interest in MCP	Increasing interest, especially for accessing internal documentation (e.g. Confluence).
Improved developer experience with IDE integration	BOB in IntelliJ is perceived as more convenient for backend and Java development.
Regular technical BOB community exchanges	A technical feedback session is now in place to share issues and best practices.

To Improve

Context management	Long sessions increase context size and token / Bob Coin consumption.
Skills / Rules centralization	Elements are still created independently, need a shared and validated repository.
Licence availability	Not all developers have access to BOB, creating different working practices.
MCP adoption	Still limited, existing integrations are not yet widely shared.
IDE and installation	Some users reported issues with installation, proxy or requests not completing in IDE.

Main pain points

IT GROUP

BOB AI	Title	Description	Reported	Owner	Status	Trend
✕	Context consumption	Long sessions and iterative prompts increase context size and Bob Coin consumption.	06/10/2026	BOB team	Investigating	=
✕	Skills / Rules fragmentation	Teams are creating their own Skills, Rules and .md instructions without a common repository.	06/10/2026	IT PS	In progress	↑
✕	Licence availability	Not all developers have access to BOB, creating different working practices.	06/10/2026	IT Group	Pending	=
✕	MCP adoption	MCP usage is still limited. Existing integrations and documentation are not yet widely shared.	06/10/2026	BOB team	In progress	↑
✕	IDE integration	Some requests executed through IntelliJ integrations do not complete while the same request works directly in BOB.	06/10/2026	BOB team	To investigate	=
✕	Installation / Proxy	Some users reported difficulties installing or configuring BOB, particularly behind corporate proxy settings.	06/10/2026	Support	To investigate	=
✕	Bob Coin reload	Reload process is currently manual. Evolution expected toward the end of the year, details to confirm.	06/10/2026	BOB team	Follow up	=
✕	Usage policy / Charter	Questions around code classification and what can or cannot be submitted to BOB.	06/10/2026	Security	Ongoing	=
