BOB AI - WEEKLY FLASH REPORT - AECC

26/10 - 30/10 Week

BOB AI | Usage

Monday	(+)	Service available - normal operation
Tuesday	(!)	Service incident: BNP-wide Bobcoin allocation was exhausted, temporarily impacting BOB access; service was restored later the same day.
Wednesday	(+)	Service available - normal operation
Thursday	(+)	Service available - normal operation
Friday	(+)	Service available - normal operation

Highlight

This week, a BNP-level Bobcoin allocation incident temporarily affected BOB availability on Tuesday; service was restored later the same day. User feedback remained strongly positive on the local agent experience, especially for work beyond code generation (Git/branch operations, CI/package/Docker activities, documentation and automated review). A troubleshooting feedback also showed that restarting with a clean investigation plan and a fresh session produced the correct root cause after an initially poor answer. BOB is also being used in TDD workflows, while reusable Usage Charter rules and a Green IT skill are being tested. Skills governance, prompt-injection risk and context/token efficiency remain points to address.

BOB AI - WEEKLY FLASH REPORT - AECC

Global Overview

Progress observed

Local agent workflow	Users highlighted the local BOB agent as a key value: a fluid experience that supports tasks beyond code generation, including Git/branch work, CI/package/Docker activities and documentation.
Troubleshooting / context reset	One feedback showed that restarting with a clean investigation plan and a fresh session led to correct root-cause identification after an initially poor response.
TDD / automated reviews	BOB is being used in TDD-oriented implementation, starting from tests; automated review capabilities were also cited as useful.
Usage Charter rules	Usage Charter controls are being shared as reusable BOB rules to guide application-level/security checks and reduce risky data or URL exposure.
Green IT skill POC	Green IT rules are being transformed and tested as a BOB skill, with selective rule use based on the task context.
User experience feedback	Users described the BOB interface and local workflow as fluid and intuitive, with useful handling of broader project context.

To Improve

Bobcoin global capacity	The BNP-wide Bobcoin allocation was exhausted on Tuesday, temporarily impacting BOB access; service was restored later the same day.
Shell / IntelliJ reliability	A 502 incident on the CLI / IntelliJ path was still reported as being under resolution and requires retesting once closed.
Model routing transparency	Users still lack visibility on which LLM is selected for a request and raised questions about the effective model pool used by BOB.
Skills governance / security	Reusable or external skills require validation and governance; prompt-injection and unsafe-skill risks were explicitly raised.
Context / token efficiency	Large rule sets or skills may increase context and token consumption; selective rule loading and compact instructions should be favored.

BOB AI - WEEKLY FLASH REPORT - AECC

Main pain points

BOB AI	Title	Description	Reported	Owner	Status	Trend
✕	Budget / Bobcoins	BNP-wide Bobcoin allocation was exhausted, temporarily impacting BOB access; service was restored later the same day.	27/10/2026	BOB / IBM	Resolved	↑
✕	Shell / IntelliJ 502	A 502 incident on the CLI / IntelliJ path was still reported as under resolution; retesting is needed after closure.	29/10/2026	BOB / IBM	Investigating	-
✕	LLM routing transparency	Users still cannot clearly see which LLM is selected for each request and raised questions about the effective model pool being used.	29/10/2026	IBM / BOB	To clarify	-
✕	Skills governance / security	Shared or external skills need a controlled validation/governance path; prompt-injection and unsafe-skill risks were raised.	29/10/2026	BNP / BOB	To define	-
✕	Rule context / token cost	Large reusable rule sets may consume context and tokens; selective loading and compact rules should be assessed.	29/10/2026	Skill owners	To assess	-
✕	Client version management	Users on older BOB versions may face usage blockers; keeping the client/plugin updated was recommended.	29/10/2026	Users / BOB	Preventive	↑
