BOB AI – WEEKLY FLASH REPORT - AECC

12/10 – 16/10 Week

BOB AI Usage

Monday	**(!)**	Single-user case: proxy ports mismatch; connection restored after correction.
Tuesday	**(+)**	Service available – normal operation
Wednesday	**(+)**	Service available – normal operation
Thursday	**(!)**	Single-user case: BOB Shell / IntelliJ requests failed; investigation ongoing.
Friday	**(+)**	Service available – normal operation

Highlight

This week, two isolated user cases were reported: a generated proxy-port configuration issue (resolved) and request failures through BOB Shell / IntelliJ (under investigation). The feedback also highlighted a need for clearer LLM identification. Separately, the IBM BOB Premium Package for Java Modernization is in an advanced multi-entity pilot. No additional teams can join at this stage; conclusions are expected during the quarter before any decision on a wider rollout.

BOB AI – WEEKLY FLASH REPORT - AECC

Global Overview

Progress observed

BOB App usability	In one reported case, the same requests worked in BOB App but failed in Shell / IntelliJ.
Proxy configuration fix	One user’s proxy configuration issue was resolved by correcting generated port settings.
Reusable Skills and Rules	Consolidation of existing skills and rules from Git and Confluence is under consideration.
Java Modernization pilot	IBM BOB Premium Package is in advanced multi-entity experimentation; results expected this quarter.
Pilot participation	The pilot cannot accept additional teams at this stage; wider rollout has not been decided.

To Improve

BOB Shell / IntelliJ reliability	A single-user report indicated request timeouts or network interruptions; cause unconfirmed.
LLM transparency	Users want to know which model actually processes each BOB request.
Context and Bob Coins	Iterative prompts and long sessions can increase context size and consumption.
Skills / Rules centralization	A shared and reviewed repository remains to be established.
MCP Adoption	Limited MCP usage reported during the technical session. Existing use cases, including Confluence integration, were mentioned as potential examples to share across teams.
Pilot rollout assessment	The ongoing evaluation will compare the Premium Java package with standard BOB.

BOB AI – WEEKLY FLASH REPORT - AECC

Main pain points

BOB AI	Title	Description	Reported	Owner	Status	Trend
✕	Shell / IntelliJ	One user reported failed requests through BOB Shell / IntelliJ while BOB App worked.	15/10/2026	BOB team	Investigating	−
✕	LLM transparency	Users requested clearer visibility on which LLM handles each BOB request.	13/10/2026	BOB team	Feedback	−
✕	Proxy script ports	One user had mismatched proxy ports generated by a script; the case was corrected.	12/10/2026	Support	Resolved case	↑
✕	Context consumption	Long sessions and repeated prompts can increase context size and Bob Coin usage.	13/10/2026	BOB team	Follow up	−
✕	Skills / Rules	Teams use separate Skills / Rules; existing Git and Confluence assets may be consolidated.	13/10/2026	IT PS	In progress	↑
✕	MCP Adoption	Limited MCP usage reported during the technical session. Existing use cases, including Confluence integration, were mentioned as potential examples to share across teams.	13/10/2026	Community	To improve	−
✕	Licence availability	Not all developers have access to BOB across teams.	13/10/2026	IT Group	Pending	−
✕	Usage policy	Teams raised questions about classification and permitted content.	13/10/2026	Security	Follow up	−
✕	Java Modernization pilot	Premium package is in advanced trial; no new teams can join and results are pending.	16/10/2026	Pilot teams	In progress	−
