BOB AI - WEEKLY FLASH REPORT - AECC

19/10 - 23/10 Week

BOB AI | Usage

Monday	**(+)**	Service available - normal operation
Tuesday	**(!)**	Service incident: Bobcoin budget exceeded; BOB may be temporarily unavailable while investigation/recharge was ongoing.
Wednesday	**(+)**	Service available - normal operation
Thursday	**(+)**	Service available - normal operation
Friday	**(+)**	Service available - normal operation

Highlight

This week, a Bobcoin budget exhaustion incident affected service availability. The technical session also confirmed an isolated BOB Shell / IntelliJ 502 issue, limitations around knowledge freshness for recent Spring Boot modernization, and IBM's automatic model-routing strategy. In parallel, the entity administration model was clarified: 1-2 entity admins will manage seats, Bobcoins and Premium Package access through a dedicated interface planned for November (timing to be confirmed). BOB Usage Charter controls were also translated into enforceable rules and successfully tested on representative scenarios.

BOB AI - WEEKLY FLASH REPORT - AECC

Global Overview

Progress observed

Entity administration model	A dedicated entity-level interface is planned for November (timing to confirm): 1-2 admins per entity will manage seats, Bobcoins and Premium Package access; ITG remains super-admin.
Consumption sizing	Current estimate is about 95-106 Bobcoins per user/month and is being used for 2027 budget and capacity planning.
2027 charging model	From 2027, licence and Bobcoin consumption are expected to be recharged to entities as the service moves beyond experimentation.
Model routing clarified	IBM confirmed automatic model selection based on task complexity, context and cost; the exact model is intentionally not exposed.
Usage Charter enforcement	BOB Usage Charter controls were translated into enforceable rules and successfully tested on representative scenarios.

To Improve

Budget monitoring / alerts	Proactive threshold alerts and closer monitoring are needed to avoid future Bobcoin envelope exhaustion.
Shell / IntelliJ reliability	502 errors were reported from BOB Shell / IntelliJ while the BOB App remained usable.
Knowledge freshness	Recent Spring Boot modernization feedback exposed outdated framework/dependency knowledge and weak grounding on current versions.
Web / knowledge access	BNP BOB currently has restricted Internet access; impact on access to up-to-date technical information remains to clarify.
Consumption guardrails	Daily or profile-level guardrails were requested in addition to the planned monthly Bobcoin allocation model.

BOB AI - WEEKLY FLASH REPORT - AECC

Main pain points

BOB AI	Title	Description	Reported	Owner	Status	Trend
X	Budget / Bobcoins	Budget exhausted; BOB could be temporarily unavailable while investigation and recharge were handled with IBM.	20/10/2026	BOB / IBM	Investigating	-
X	Shell / IntelliJ 502	Isolated user reports of 502 failures via BOB Shell / IntelliJ while the same requests worked in BOB App.	20/10/2026	BOB / IBM	Investigating	-
X	Knowledge freshness	Spring Boot modernization feedback showed outdated framework and dependency knowledge for recent versions.	20/10/2026	IBM Lab	Feedback	-
X	LLM transparency	IBM confirmed the exact LLM used per request is not exposed by design; the model pool evolves dynamically.	20/10/2026	IBM	By design	-
X	Budget alerts	Proactive alerting / threshold controls are needed before the Bobcoin envelope is exhausted.	20/10/2026	BOB team	To improve	-
X	Web / knowledge access	BNP BOB currently has restricted Internet access; impact on access to up-to-date technical information remains to clarify.	20/10/2026	BNP / BOB	To clarify	-
