BOB AI - WEEKLY FLASH REPORT - AECC

26/10 - 30/10 Week

BOB AI | Usage

Monday	**(+)**	Service available - normal operation
Tuesday	**(!)**	Service incident: Bobcoin budget exceeded again; BOB was temporarily unusable. A new Bobcoin batch was received at 14:40 and service was restored.
Wednesday	**(+)**	Service available - normal operation
Thursday	**(+)**	Service available - normal operation
Friday	**(+)**	Service available - normal operation

Highlight

This week, BOB experienced another Bobcoin budget exhaustion incident on Tuesday. BOB became temporarily unusable while the team investigated the issue with IBM and waited for the expected replenishment. A new batch of Bobcoins was received at 14:40 and service was restored the same day. The recurrence of the issue reinforces the need for proactive budget monitoring, earlier replenishment and sufficient Bobcoin capacity to avoid repeated service interruptions.

BOB AI - WEEKLY FLASH REPORT - AECC

Global Overview

Progress observed

Same-day service recovery	BOB service was restored on Tuesday after a new batch of Bobcoins was received at 14:40.
Bobcoin replenishment	A new Bobcoin batch was received after the budget-exceeded incident, allowing users to resume normal usage.
IBM coordination	The team investigated the budget exhaustion issue with IBM while waiting for the planned Bobcoin replenishment.
BOB usage strategy	BOB usage positioning is still being defined according to user profiles, use cases, cost, security and data constraints.
2027 cost governance	Cost and consumption are being considered as key criteria for future BOB usage guidance and 2027 governance.

To Improve

Recurrent budget exhaustion	The budget-exceeded issue occurred again, creating another service interruption within a short period.
Budget monitoring / alerts	Proactive thresholds and earlier alerts are needed before the available Bobcoin envelope is exhausted.
Replenishment timing / buffer	The new Bobcoins were expected in the morning, but BOB remained unusable until the replenishment arrived at 14:40.
Knowledge freshness	Recent framework and dependency changes can exceed the model's embedded knowledge, especially for fast-moving technologies.
Web / knowledge access	Web access is constrained by BNP network rules, and some public or official technical sources may remain unavailable.
