BOB AI monthly summary - October

BOB AI - ITPS

Monday	Tuesday	Wednesday	Thursday	Friday
			01/10	02/10
05/10	06/10	07/10	08/10	09/10
12/10	13/10	14/10	15/10	16/10
19/10	20/10	21/10	22/10	23/10
26/10	27/10	28/10	29/10	30/10

Details
Smooth experience - BOB reporting starts on 06/10
Proxy/configuration issue (12/10) + isolated BOB Shell / IntelliJ errors (15/10)
Bobcoin budget exhaustion - temporary service impact
BNP-wide Bobcoin allocation exhausted - service restored the same day

Highlight

(*) - BOB AI reporting started on 06/10. Overall service remained stable, with partial incidents on 12/10 (proxy/configuration), 15/10 (isolated BOB Shell / IntelliJ errors), 20/10 and 27/10 (Bobcoin budget/capacity exhaustion; service was restored the same day on 27/10). Adoption progressed across development teams, with strong feedback on the local agent, IDE integration, reusable Skills / Rules, TDD and broader automation use. Main areas to improve remain Bobcoin capacity / alerts, Shell / IntelliJ reliability, model transparency, knowledge freshness and Skills governance.

Main pain points

BOB AI	BOB Shell	Title	Description	Reported	Owner	Status	Trend
X		Budget / Bobcoins	Two Bobcoin capacity incidents affected service during the month (20/10 and 27/10). The 27/10 interruption was restored the same day; proactive threshold alerts and capacity monitoring remain needed.	20/10/2026	BOB / IBM	Monitoring	-
	X	Shell / IntelliJ reliability	Proxy/configuration and BOB Shell / IntelliJ issues were reported during the month, including 502 errors while the BOB App remained usable. The CLI / IntelliJ path still required follow-up and retesting.	15/10/2026	BOB / IBM	Investigating	-
X		Context / token consumption	Long sessions, iterative prompts and large reusable rule sets can increase context size and Bobcoin consumption. Selective rule loading and compact instructions should be favored.	06/10/2026	BOB team	To improve	-
X		Skills / Rules governance	Skills and Rules are increasingly reused, but a shared validated repository and controlled governance path are still needed, especially to address unsafe-skill and prompt-injection risks.	06/10/2026	IT PS / BOB	In progress	✓
X		Knowledge / model transparency	Recent framework knowledge can lag behind current versions and users still lack direct visibility on which LLM is selected per request; restricted web access can also limit fresh technical grounding.	20/10/2026	IBM / BOB	To clarify	-
